Congratulations on purchasing your HIPPOS – it's the simplest and easiest way to cut your water use – in the toilet cistern.

HIPPOS are suitable for toilet cisterns that were installed before 2001 – toilets installed after 2001 are already water efficient and the flush volume should not be reduced further. Each **HIPPO** will save between 2.5 – 3.5 litres per flush, but if you find that this level of saving impairs the flush efficiency of the toilet, you can adjust the volume saved by simply cutting off one of the bottom corners, thus:

Only cut if a greater
flush is required

Fitting your **HIPPOS** is a very straight forward task that can be completed in minutes, requiring simply your hands, a jug of water and the fitting instructions which are printed on the reverse of the **Hippo**. Information is also available on our web site www.hippo-the-watersaver.co.uk

Each **HIPPO** has a small hole punched through both sides, which acts as a relief valve and allowing slow circulation of water, to prevent stagnation and evaporation, the inclusion of which does not impair performance.

If you are on a metered water supply, then the likely level of saving could pay for these **HIPPOS** in a matter of months. If your supply is not metered, then we thank you for using the **HIPPOS** to help mitigate any effects of climate change which are now predicted to occur.
